Definitions and Footnotes

*The average cost of funds ratio is defined as the sum of the period interest paid and accrued on deposits (excluding escrow deposits), FHLB advances, and other borrowings, divided by the average period balance of deposits (excluding escrow deposits), FHLB advances, and other borrowings. The median cost of funds is the midpoint value of individual institutions' cost of funds ratios, adjusted for variation in length of month. All series reflect the cost of funds for OTS Regulated, SAIF Insured Institutions required to file the monthly Cost of Funds reports.

**The Federal Deposit Insurance Reform Act of 2005 created a single insurance fund by merging Savings Association Insurance Fund (SAIF) and Bank Insurance Fund (BIF), effective March 31, 2006, to be known as the Deposit Insurance Fund (DIF). NOTE: Institutions designated as BIF insured prior to March 31, 2006, that were not required to file cost of funds reports will continue to be excluded from the calculation.

(1) Effective with the January 1999 index, the OTS is using a revised methodology that dampens significantly the month-to-month volatility in the index caused by the change in the number of days in the month. In addition to some other technical modifications, the new methodology assumes an average length of month of 30.4375 days, the average number of days in a month over a four-year period. The index value for January 1999 using the old methodology would have been 4.71%.
